

PROFormance™

Medical Management Outcome Reporting Software

Solution Overview

Today, employers and health plans demand real, timely results for their customers. It is no longer adequate to report on process and clinical execution. Your clients want to know the financial value of your program, with a methodology that they have confidence in and routine production of accurate and credible reports backing up the program and their investment.

PROFormance™ allows health plans and other medical management program sponsors to perform consistent reporting of financial, operational and clinical metrics for customers. The flexible application uses a dynamic and continuously updated data warehouse, giving end-users access to a variety of methodologies and comparison groups, including the most-frequently encountered DMAA methodology.

About Us

Solucia is an independent analytics and consulting firm specializing in evaluating and improving the performance of medical management programs. We assist our clients in solving complex business issues through our technology, research, consulting and unique analytical services.
