

# PROGuide™

## Medical Management Workflow Platform

### Solution Overview

Today, Health Plans in-sourcing or planning to offer an internal Care and Disease Management program require an adequate, cost effective workflow system to manage the complex process of identifying and segmenting individuals to be targeted for such programs. In addition, sponsors require software to support robust process and outcomes reporting specific to each client or sponsor.

Solucia offers a highly-flexible workflow application to support the effective delivery of care management or disease management programs. The PROGuide™ application automates a wide array of internally provided or developed medical management programs. The PROGuide™ application includes installation and training services, customization, consulting support and application hosting.

### About Us

Solucia is an independent analytics and consulting firm specializing in evaluating and improving the performance of medical management programs. We assist our clients in solving complex business issues through our technology, research, consulting and unique analytical services.

For more information, please contact us at [info@soluciaconsulting.com](mailto:info@soluciaconsulting.com) or 860.676.8808.

### Features and Benefits

- Pre-configured with intervention programs for chronic conditions
- Customizable to clients' intervention programs
- Easily configured by end-users - does not require programmers
- Provides a consolidated electronic health record, including risk-scoring
- Remote access and upload capability
- Robust reporting capability
- Links to PROSpect™ and PROFormance™ Modules for savings projections and outcomes reporting
